YAMUNA BANDLA

Apigee Developer | GCP Cloud Engineer | DevOps & Platform Engineer

Mobile: +91 8341993352 | Email: chammu20241@gmail.com | Hyderabad, India

PROFESSIONAL SUMMARY

Cloud and API engineer with 4+ years of experience delivering API and cloud platform solutions on Apigee X and Google Cloud Platform (GCP). Builds secure API proxies and policies, led the migration from Apigee Edge to Apigee X, and provisions GCP infrastructure with Terraform (VPC, GKE, Cloud NAT, Cloud Armor). Automates CI/CD with Jenkins, Maven and Bitbucket, and has taken 50+ backend services and 50+ API proxies to production.

TECHNICAL SKILLS

API Management	Apigee X, Apigee Edge, API Proxies, Shared Flows, API Products, Policies, Postman, Swagger, OpenAPI
Google Cloud (GCP)	Cloud Run, Cloud Functions, Pub/Sub, Cloud Composer, GKE, Compute Engine, Cloud Storage, Cloud Load Balancing, IAM, Cloud Monitoring, Cloud Logging
Networking & Security	VPC, Subnets, Firewall Rules, Cloud NAT, Cloud Armor, OAuth 2.0, API Key, CORS, JSON Threat Protection
Containers & IaC	Docker container images, Kubernetes (GKE), Terraform (reusable modules, multi-environment provisioning)
CI/CD & Tools	Jenkins, Bitbucket Pipelines, GitHub Actions, Maven, SonarCloud, Apigee Lint, Git, JIRA (Agile / Scrum)
Scripting	Shell, YAML, SQL, XML

WORK EXPERIENCE

PRODAPT SOLUTIONS PRIVATE LIMITED Dec 2021 – Jul 2026

Cloud & API Platform Engineer (GCP & Apigee)

Client: Lumen Technologies *Sep 2024 – Jul 2026*

- Led the migration of API proxies from Apigee Edge to Apigee X and of backend services from legacy architecture to GCP, ensuring compatibility, minimal downtime and improved performance.
- Designed and developed API proxies and reusable policies across the full SDLC, implementing OAuth 2.0, API Key validation and threat protection.
- Configured Quota, Spike Arrest and caching policies, improving API performance by ~20%.
- Designed and provisioned GCP platform infrastructure (VPCs, subnets, firewall rules, Cloud NAT) with reusable Terraform modules.
- Secured the perimeter with Cloud Armor policies on external load balancers, and enabled private GKE nodes to reach external services through Cloud NAT.
- Built CI/CD pipelines in Jenkins and Maven, removing manual release steps and improving deployment speed by ~20%; containerized applications with Docker and deployed them to GKE.

- Packaged services as Docker container images and deployed them to Cloud Run; built event-driven workflows with Cloud Functions triggered by Pub/Sub topics and subscriptions.
- Deployed workflow code to Cloud Composer for scheduled pipeline orchestration.
- Set up monitoring and alerting with Cloud Monitoring and Cloud Logging; troubleshot production issues to reduce downtime. Managed IAM roles and service accounts using least privilege.

Client: Hyperoptics – British Telecommunication Company *May 2022 – Aug 2024*

- Developed and deployed 50+ API proxies on Apigee Edge and 50+ backend services on GCP to production.
- Implemented OAuth 2.0 via service callouts, CORS and JSON Threat Protection; built Shared Flows to reduce duplicated logic across APIs.
- Provisioned GCP networks, firewall rules and compute with Terraform, and defined segmentation between application tiers.
- Automated deployments with Bitbucket Pipelines and Maven, reducing deployment time by ~30%; integrated SonarCloud quality gates and Apigee Lint validation into CI.
- Containerized components with Docker and built reusable deployment templates for service onboarding and versioning.

CERTIFICATIONS

- Google Cloud Certified – Associate Cloud Engineer
- HashiCorp Certified – Terraform Associate (003)

EDUCATION

Bachelor's – Electronics and Communications Engineering 2017 – 2021

Guntur, Andhra Pradesh
